

TIPS for HANDLING and STORING your vaccines

Store vaccines in accordance with labelling, generally 2°C (35°F) to 7°C (45°F).
Do not freeze vaccines. Follow label instructions.

Protect vaccines and filled syringes from sunlight and heat.

Gently mix modified live vaccines using a rolling motion as opposed to vigorous shaking to prevent damage to the vaccine. Use within an hour of mixing.

Use new disposable syringes or clean reusable syringes with warm water and soap. Rinse thoroughly and let dry between uses. Do not use alcohol or disinfectant.

Discard bent or broken needles. Change needles often, ideally for each animal. Use a new needle when withdrawing vaccine from the vial.
